ABOUT

Professional Fullstack Developer with nearly 6 years of experience. Currently working at Aviasales – one of the largest flight search platforms in Eastern Europe. My work focuses on building internal platforms and automation tools that help teams operate more efficiently by simplifying complex workflows. I particularly enjoy turning systems with complex logic, edge cases, and multiple integrations into clear, reliable, and easy-to-use products!

At Aviasales, I've designed and developed self-service portals, workflow automation systems, and integrations between corporate services (HR systems, Slack, Jira, and external APIs), enabling non-technical teams to work more independently.

I have extensive experience managing projects end-to-end – from designing the architecture to setting up full CI/CD pipelines and deploying to production.

EXPERIENCE

DEC.2022 - PRESENT | AVIASALES

Senior Fullstack Developer (HR & Internal Products)

Leading end-to-end development of internal and external products for a company of 1,000+ employees. Responsible for driving projects from requirements and architecture design to deployment and CI/CD automation. My work includes building internal financial and HR platforms, Slack-based automation tools, and integration services used daily by many teams

Key achievements:

- Built company-wide self-service portals (HR & Finance) with complex workflows, enabling non-technical teams to create and evolve processes independently;
- Designed a schema-driven form system that preserved historical accuracy of submitted claims, improving consistency and reliability of financial workflows;
- Implemented role-based access control and authentication flows (OAuth, Keycloak) to support secure and scalable access across systems;
- Built Slack-based automation workflows and bots to streamline internal processes and integrate company services;
- Maintained and evolved the company job platform, including admin tools, integrations, and automation pipelines with external recruiting systems;
- Improved developer productivity by building shared tooling (CLI utilities, reusable NestJS modules, CI/CD workflows, and a UI kit), enabling faster delivery across projects;
- Acted in a product-oriented role: breaking down requirements, prioritizing features, and ensuring smooth delivery across stakeholders;

Skills:

React, TypeScript, NestJS, Next.js, Redux, CI/CD, GraphQL, OAuth, AWS, PostgreSQL, Prisma

SEP.2021 - OCT.2022 | MANYCHAT

Frontend Developer

- Developed and optimized marketing platforms for online events, including a fully automated webinar system that enabled the marketing team to create landing pages and registration flows without developer involvement. Built and maintained high-traffic landing pages with Next.js (SSR), Gatsby, GraphQL, and Contentful, focusing on performance and SEO;
- Migrated core pages from Gatsby to Next.js, introduced A/B testing practices, and implemented cross-domain traffic attribution;
- Collaborated directly with stakeholders from marketing and product teams to clarify requirements, prioritize tasks, and shape technical solutions;

Skills:

React, TypeScript, Node.js, Next.js, Redux, GraphQL

DEC.2020 - AUG.2021 | POSTSCRIPTUM AGENCY

Frontend Developer

Created interactive web experiences – presentations, quizzes, and browser-based games – using React. Focused on engaging UI, animations, and smooth user interactions. Gained strong experience in implementing complex visuals and delivering high-quality, polished frontends.

Skills:

React, TypeScript, Next.js

AUG.2020 - SEP.2021 | FREELANCE

Frontend Developer

Temporary contract work with design studios, building interactive web experiences with complex animations, creative UI concepts, and highly polished visual interfaces.

Skills:

React, TypeScript, Next.js

EDUCATION

JAN. 2025 - JUNE 2025 | YANDEX PRACTICUM

Software Architecture

Completed an intensive 6-month program focused on real-world architectural challenges. Gained hands-on experience with:

- Microservices & Microfrontends – designing modular systems, splitting monoliths, improving scalability and team autonomy.
- Cloud & Infrastructure as Code – Docker, Kubernetes, Terraform for automated deployments.
- Scalability & Performance – replication, sharding, caching, load balancing.
- Event-Driven & Real-Time Systems – queues, event sourcing, streaming.
- Monitoring & Security – Prometheus, Grafana, ELK, Jaeger; IAM, SSO, compliance, and data privacy.
